

Position Statement on Prescribing in Gender Incongruence for Children and Young People

NHS South West London (SWL) does not support prescribing of puberty-blocking medicines gonadotrophin releasing hormone (GnRH) analogues or gender affirming hormones (GnRH) for children and young people (<18 years) by GPs in primary care. The prescribing responsibility for puberty-blocking medicines or gender affirming hormones for children and young people will remain under the gender identity services.

- No under 18- year-old should be started on GnRH analogues to suppress puberty for gender incongruence or gender dysphoria
 - The initiation of GnRH analogues is not possible in the NHS specialist Children and Young People's Gender Service unless this is part of a future NIHR research study or the patient was referred to an NHS paediatric endocrinology team for assessment of suitability of GnRH analogues for gender incongruence or gender dysphoria on or before 31 March 2024.
 - Other NHS clinicians cannot initiate a new NHS prescription.
 - Private practitioners cannot initiate a new prescription to patients who have not yet started treatment.
- Children and Young People (<18 years) who have already started puberty blockers may need to continue in primary care:
 - For patients under the care of an NHS provider, prescribing may need to continue in primary care until the patient is next reviewed by the service Lead Clinician under the NHS Gender Identity Service (prescriptions marked SLS).
 - For patients under the care of a private provider, prescribing may need to continue in primary care until the patient is next reviewed. Patients should be advised of the new NHS policy and recommendation made to return to the private provider for consideration of stopping (prescriptions marked SLS).
- GnRH analogues - medicines that consist of, or contain, buserelin, gonadorelin, goserelin, leuprorelin acetate, nafarelin or triptorelin.

NHS SWL does not support the routine prescribing of gender affirming hormones (masculinising or feminising hormones) testosterone or oestrogen for children and young people (<18 years) by GPs in primary care. The prescribing responsibility for gender affirming hormones (masculinising or feminising hormones) will remain under the gender identity service until an appropriate shared care guideline is reviewed at the SWL Integrated Medicines Optimisation Committee (IMOC).

Rationale

- In September 2020, NHS England commissioned an independent and wide-ranging expert review of gender identity services for children and young people led by Dr Hilary Cass¹ which examined the Gender Identity Development Service (GIDS) at the Tavistock and Portman NHS Foundation Trust, the only specialist gender dysphoria service for children and young people.
- In May 2024, The Government has introduced emergency restrictions on the use of gonadotrophin releasing hormone (GnRH) analogues used to suppress puberty as part of treating gender incongruence or gender dysphoria in children and young people who are under 18 years of age. Some of these restrictions, the ones for private prescriptions, will take effect from **3 June 2024**.
- It will become a **criminal offence** for a doctor, pharmacist, or any other individual in Great Britain to sell or supply these drugs to patients under the age of 18 except in the following circumstances:
- The child or young person is prescribed these medicines on an **NHS prescription** (for example, from the NHS Children and Young People's Gender Service). All NHS prescriptions and directions are outside of this ban (RED – Specialist only via Gender Identity Services).
- The child or young person is prescribed these medicines on a **private prescription** from a UK prescriber that fulfils the following criteria:
 - The prescription was dated prior to 3 June 2024; or
 - It is a repeat prescription but only when the initial prescription was written in the six months prior to 3 June 2024;
 - There are also requirements for prescriptions issued from 3 June 2024 to be marked with the person's age, annotated by the prescriber with "SLS", and in the case of prescriptions issued before that date, for the person to provide proof of identity and age.
 - The prescription is for a purpose other than the treatment of gender incongruence or gender dysphoria, or for gender incongruence/dysphoria if the patient started treatment for gender incongruence/dysphoria before 3 June 2024.
- Pharmacies in Great Britain will no longer be able to dispense new private prescriptions, dated on or after 3 June 2024 for GnRH analogues from the EEA or Switzerland for anyone under 18 years old.
- Additionally, from 26 June 2024 General Practitioners (GPs) in England will only be able to supply prescriptions for GnRH analogues in the following circumstances:
 - The patient is aged 18 years or over; or
 - The patient is under 18 years old, and the purpose of the prescription is for a medical condition other than gender incongruence or gender dysphoria; or

- The patient is under 18 years old and has started treatment with these medicines, and for these purposes they will be treated as having started treatment if they have been issued with a prescription for these medicines since 3 December 2023, even if they have not yet started taking the medicines.
- As indicated above, new private prescriptions for GnRH analogues from a prescriber in the European Economic Area (EEA) or Switzerland who is not UK registered are banned from being supplied in Great Britain in all circumstances for patients aged under 18.
- Prescribing from unregulated sources and unregulated providers: Children, young people and their families are strongly discouraged from sourcing puberty suppressing or gender affirming hormones from unregulated sources or from on-line providers that are not regulated by UK regulatory bodies. SWL ICS does not routinely support shared care prescribing with private prescribers.
